

# JETSTREAM

## BROADBAND - EVERYWHERE - ANYWHERE - NOW!

You probably want the benefits of Broadband internet for yourself - you can download music, video and data between 5 and 40 times faster than using a standard phone line - but can't get it in your area.

Well, here is the good news: *you can have it now, with **Jetstream**, the affordable satellite broadband service.*

### How does Jetstream Work?

**Jetstream** boosts the power of your existing dial-up internet connection by adding a cost effective, high speed download capability. This means that you can surf the Internet without those long waits for the information to get to your screen. And if you don't already have a dial-up connection we can provide one for you at very competitive rates.

Whenever **Jetstream** detects the need for a big download, for example, music files (MP3) or an e-mail with pictures or video attached, then it automatically activates a high speed satellite link for supercharged transfers. One **Jetstream** customer commented "I got **Jetstream 1024** and downloaded a 4Mb file in just 11 seconds".

**Jetstream** is an ideal solution for both home users and small businesses, with a choice of speeds to suit your needs and your pocket.

With **Jetstream** you also get free-to-air digital TV channels on your PC at no extra cost.

### How do I get Jetstream

As part of the service we will install the

satellite dish, cabling and external modem (set-top box), connect it up to your PC (266MHz processor plus 64Mb RAM minimum with Windows 98SE or later, a modem and a spare USB port or PCI slot) and assist you to get everything running. You can then sit back and enjoy not waiting!

Alternatively, if you do not have a USB connector, or want to save some of the installation charge, then we can supply an internal PCI modem with full instructions for self-installation. We still install the satellite dish and get the system working for you.

### How much will it cost

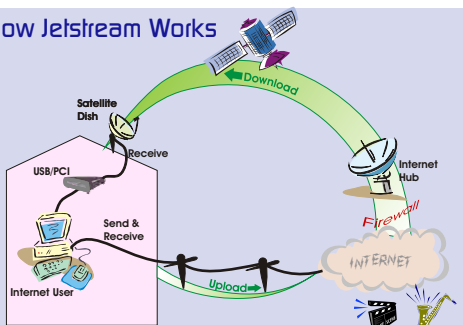

There is a one-off installation charge as shown below:

- Home PCI - £215 (£252.63 inc VAT)
- Home USB - £315 (£370.13 inc VAT)
- Business PCI - £345 (£405.38 inc VAT)
- Business USB - £445 (£522.88 inc VAT)

then simply choose one of the 4 services that suits your requirements.

If you also need dial-up internet, we offer a generous Freephone service for just £15 (£17.62 inc VAT) - call us for details.

### How Jetstream Works

### All our packages include:

- Internal self-fit PCI card or external USB DVB, client software for Windows and satellite dish.
- Service Availability of 99% per year.
- 9am to 5.30pm working week Customer Service.

Note: Jetstream is intended to enhance the internet experience for browsers in non-ADSL areas and is not recommended for 'network sharing', 'online gaming' or 'constant large-file downloading'.
